

- One embedded RISC processor
- Six programmable packet processors
- Multiple, independent onboard buses
- Processor synchronization mechanisms
- Small amount of onboard memory
- One low-speed serial line interface
- Multiple interfaces for external memories
- Multiple interfaces for external I/O buses
- A coprocessor for hash computation
- Other functional units

**Figure 18.2** A list of the major facilities found on Intel's IXP1200 network processor chip. In addition to the hardware facilities on the chip, the vendor offers a software development environment.
