		NOTES
PART I		
Introduction		
Teach Net. Sys. Design PART I 1	October, 2003	
Topic And Scor	pe	
Network processors in academia: gradu curricula, lab facilities, and projects	ate and undergraduate	

Teach Net. Sys. Design -- PART I

2

Plan For The Talk		NOTES
Introduction and overview		
• An example graduate course		
• An example undergraduate course		
• Example lab facilities		
Discussion		
Teach Net. Sys. Design PART I 3	October, 2003	
Why Should Your Institution		
<b>Teach Network Processors?</b>		

- Exciting new topic
- Popular among students
- Access to state-of-the-art technologies

4

- High teaching evaluations
- Just plain fun

Teach Net. Sys. Design -- PART I

Why Sho Teach N	NOTES		
• Gain familiarity with	n emerging technolo	ду	
• Expose students to n paradigms	ew hardware and pr	ogramming	
• Force students to thi	nk about design of 1	network systems	
• Allow students to ex	periment with embe	edded systems	
• Prepare students for	research		
Teach Net. Sys. Design PART I	5	October, 2003	

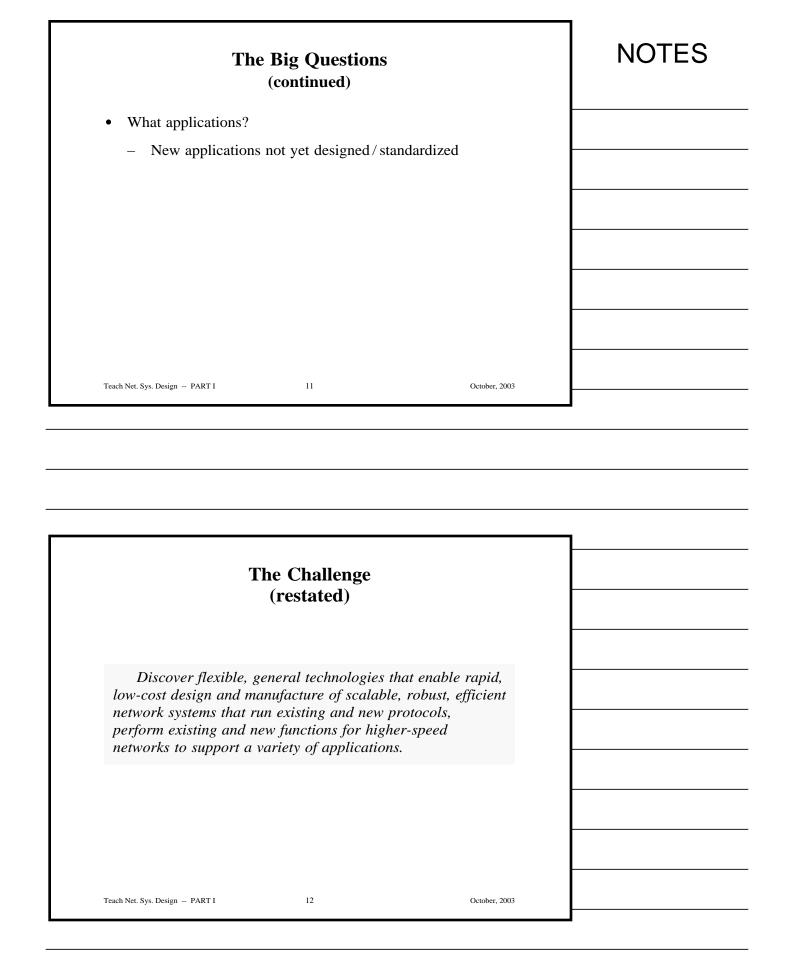

Possible NP Course Emphasis	
• Hardware engineering	
<ul> <li>Internal structure of network processor chip(s)</li> </ul>	
<ul> <li>Design of external interfaces</li> </ul>	
<ul> <li>Engineering tradeoffs</li> </ul>	
Software design	
<ul> <li>Programming models and paradigms</li> </ul>	
<ul> <li>Special-purpose programming languages</li> </ul>	
<ul> <li>Approaches to parallelism</li> </ul>	
Teach Net. Sys. Design PART I 6 October, 2003	

Possible NP Course Emphasis (continued)	NOTES	
• Networking		
<ul> <li>Analysis of protocols</li> </ul>		
– Implementation of a stack		
<ul> <li>Monitoring and control of traffic</li> </ul>		
• Network systems design		
– Overall design of switch, router, firewall, etc.		
<ul> <li>High-speed protocol implementation</li> </ul>		
<ul> <li>Integration of hardware and software</li> </ul>		
Teach Net. Sys. Design PART I 7	October, 2003	
		J

What Shou	ıld You Tell S	Students?		
• There is a huge oppo	rtunity for			
– Learning a new to	echnology			
– Research in a new	v field			
Teach Net. Sys. Design PART I	8	O	ctober, 2003	

The Challenge	NOTES
Discover ways to improve the design and manufacture of complex networking systems.	
Teach Net. Sys. Design PART I 9 October, 2003	

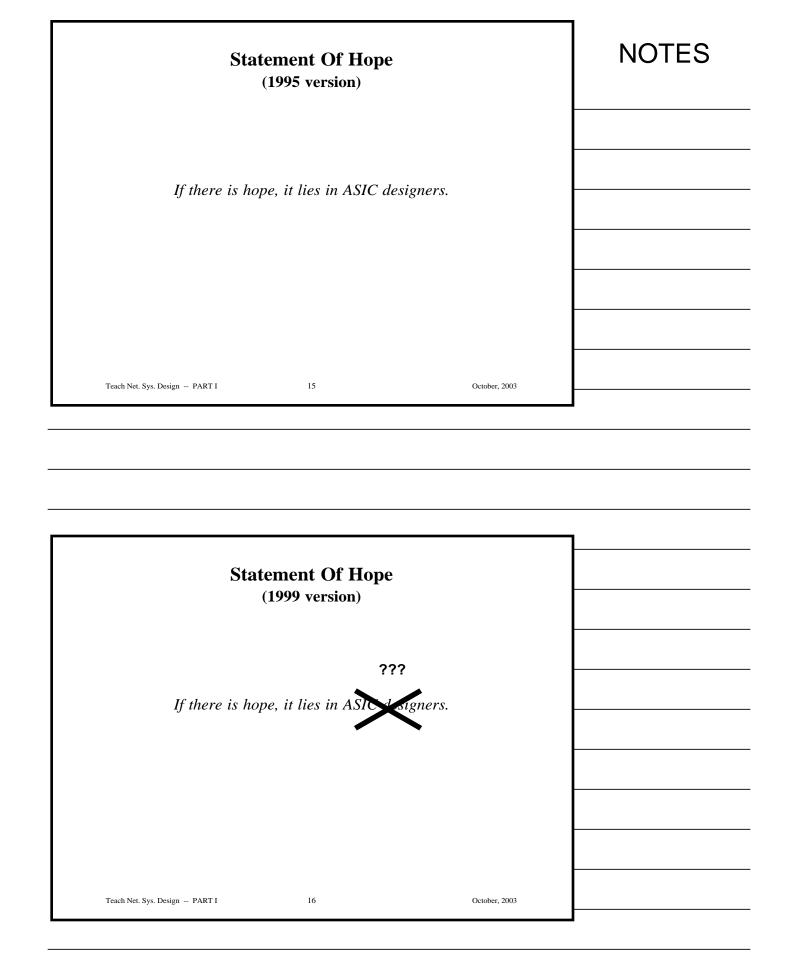

The	Big Question	s
• What systems?		
– Everything we ha	ve now plus new	
• What physical comm	unication mechanis	sms?
<ul> <li>Existing and eme</li> </ul>	rging communicati	on technologies
• What speeds?		
– Two orders of ma	ignitude beyond the	ose in use
• What protocols?		
– Traditional and no	ew	
Teach Net. Sys. Design PART I	10	October, 2003

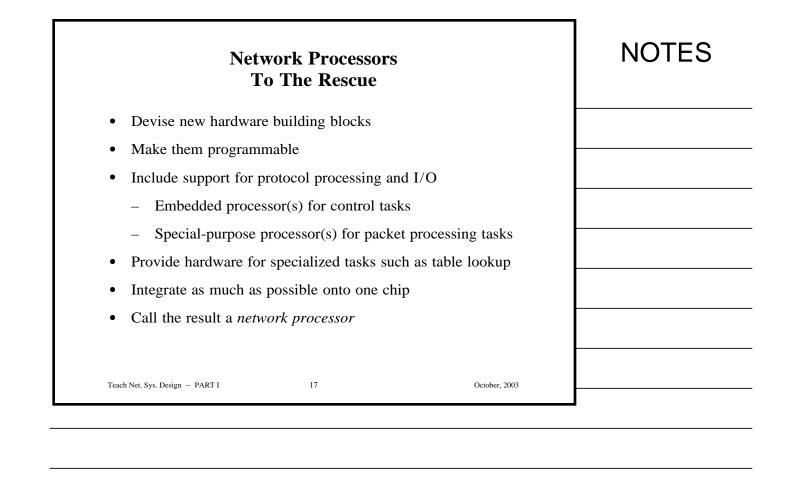

Special D	ifficulties		NOTES
Ambitious goal			
• Vague problem statement			
• Problem is evolving with the	solution		
• Pressure from			
– Changing infrastructure (	e.g., wireless)		
- Changing applications (e	.g., VoIP)		
Teach Net. Sys. Design PART I	3	October, 2003	
			_
Statement (1990 v			

Teach Net. Sys. Design -- PART I

14

	Definition		
A network processor is hardware device that con RISC processor with the (i.e., ASIC chips). Netwo	nbines the low co speed and scalabi	st and flexibility of a lity of custom silicon	
to construct network syste	-		 
Teach Net. Sys. Design PART I	18	October, 2003	

Statement Of Hope (2003 version)	NOTES
programmers! If there is hope, it lies in ASIC designers.	
Teach Net. Sys. Design PART I 19 October, 2003	

				1
I	Disclaimer			
In the field of net	work processors	, I am a tyro.		
Teach Net. Sys. Design PART I	20		October, 2003	

Definition	NOTES
Tyro $\langle Ty'ro \rangle$ , n.; pl. <i>Tyros</i> . A beginner in learning; one who is in the rudiments of any branch of study; a person imperfectly acquainted with a subject; a novice.	
Teach Net. Sys. Design PART I 21 October, 2003	

I	By Definition		
In the field of netw	vork processors, yo	u are all tyros.	
Teach Net, Sys, Design PART I	22	October, 2003	
Teach Net. Sys. Design PART I	22	October, 2003	

In	Our Defense		NOTES
When it comes to ne	twork processors, ev	eryone is a tyro.	
Teach Net. Sys. Design PART I	23	October, 2003	
			•

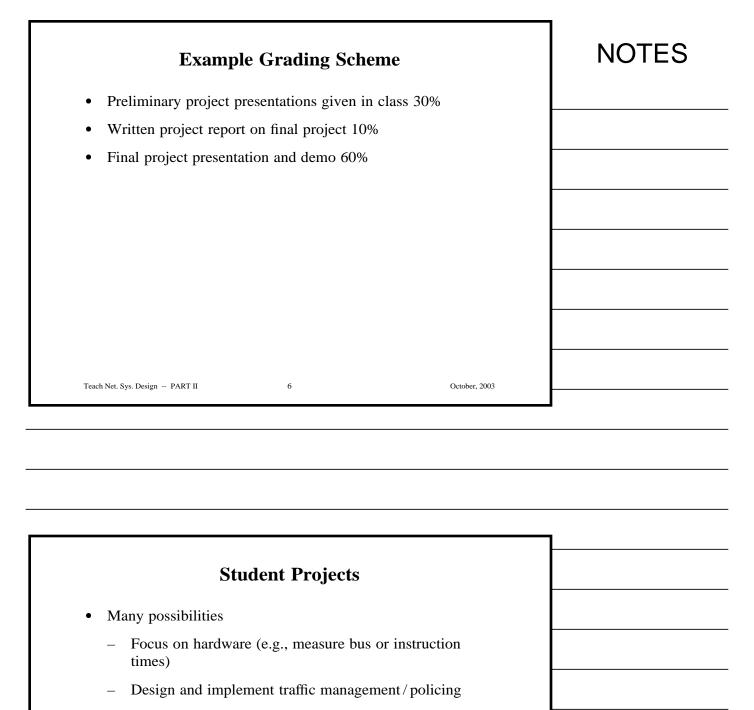

PART II		
An Example Graduate Cou On	rse	
Network Processors		
Teach Net. Sys. Design PART II 1	October, 2003	

Goals	NOTES
• Become familiar with a variety of network processor architectures	
• Be able to assess and discuss design tradeoffs and limitations of each approach	
• Learn the details of at least one NP	
• Gain experience implementing protocol processing functions in software	
• Understand the issues of scaling a network system	
Teach Net. Sys. Design PART II 2 October, 2003	
	1

Organization		
• Seminar		
• Professor		
- Gives a few introductory lectures		
<ul> <li>Leads discussion</li> </ul>		
<ul> <li>Asks questions</li> </ul>		
• Students		
<ul> <li>Read about network processors</li> </ul>		
<ul> <li>Design and implement a project</li> </ul>		
<ul> <li>Report on their project</li> </ul>		
Teach Net. Sys. Design PART II 3	October, 2003	

Topics	NOTES
Hardware architectures for protocol processing	
Classification	
Switching fabrics	
Traffic management	
Network processors	
• Design tradeoffs and consequences	
• Details of one example network processor	
– Programming model and program optimization	
<ul> <li>Cross-development environment</li> </ul>	
Teach Net. Sys. Design PART II 4 October, 2003	

What Stu	dents Do Not	Learn
• EE details		
<ul> <li>VLSI technology a</li> </ul>	and design rules	
– Chip interfaces: IC	Cs and pin-outs	
– Waveforms, timing	g, or voltage	
<ul> <li>How to wire wrap</li> </ul>	or solder	
• Economic details		
<ul> <li>Comprehensive list</li> </ul>	t of vendors and c	commercial products
<ul> <li>Price points</li> </ul>		
Teach Net. Sys. Design PART II	5	October, 2003

- Find the limits of a particular NP
- Compare NP architectures
- Implement application-layer functionality
- Other (e.g., measure the effect of security on speed)

7

• Students choose their topic (subject to approval)

Teach Net. Sys	. Design	PA	ART II
----------------	----------	----	--------

Project Teams	NOTES
• Possibilities	
– Work alone	
<ul> <li>Work in a group of two</li> </ul>	
– Work in a group of three or more	
• Students choose group composition and size	
• Note: project only approved if commensurate with group size	
Teach Net. Sys. Design PART II 8 October, 2003	
Teach Net. Sys. Design PART II 8 October, 2003	

Proje	ct Administra	tion	
• Register group (week	(2)		
• Submit a topic for ap	proval (week 4)		
• Give a preliminary p	roposal (week 5)		
• Report on status (we	ek 9–10)		
• Demonstrate project	and turn in report	(weeks 13-15)	
Teach Net. Sys. Design PART II	9	October, 2003	
			<u> </u>

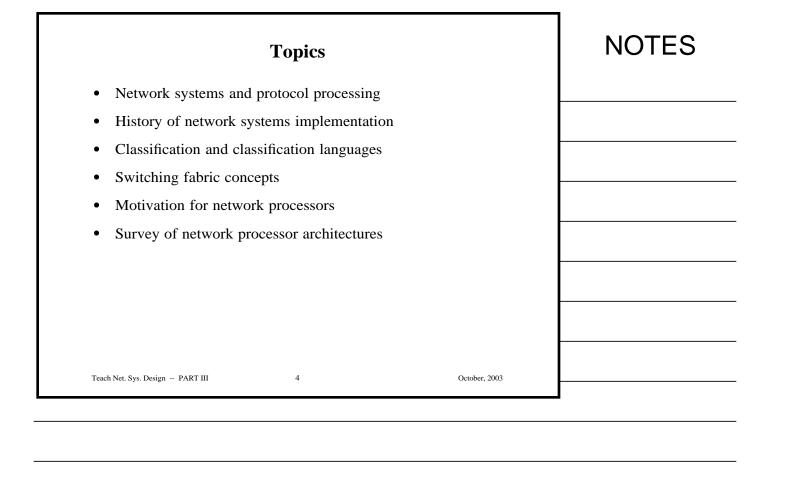

Example Student Projects			NOTES
• Network Address Tra	unslator (NAT box)		
• Web load balancer			
• IPsec implementation	ı		
• Configurable Internet	firewall		
• Traffic monitor (colle	ect per-flow statistics)		
• Virtual Private Netwo	• Virtual Private Network router		
• Intrusion detection sy	vstem		
• TCP terminator			
• IPv6 forwarder			
Teach Net. Sys. Design PART II	10	October, 2003	

			7
Recom	mended Text	book	
Comer, D., <i>Network Syste</i> Intel IXP Version, Prentic			
Teach Net. Sys. Design PART II	11	October, 2003	
reach net. Sys. Design — PART II	11	October, 2005	]

Stud	dent Reaction		NOTES
• Enthusiastic response			
<ul> <li>- "Excellent course"</li> </ul>	,,		
<ul> <li>"One of the most taken at Purdue"</li> </ul>	interesting and fun course	s I have	
• Projects that go beyon	d the minimum		
• High course evaluation	ns		
Teach Net. Sys. Design PART II	12	October, 2003	
	PART III		
Α	n Example graduate Course		
A Underg	n Example		
A Underg	n Example graduate Course On		
A Underg	n Example graduate Course On		
A Underg	n Example graduate Course On		

Goals	NOTES
• Become familiar with concept of network processor	
• Appreciate that the field is new and evolving	
• Gain experience programming one network processor	
Implement basic protocol processing	
<ul> <li>Layer 2 bridging</li> </ul>	
<ul> <li>Packet header parsing</li> </ul>	
• Be able to characterize and describe features of network processors	
Teach Net. Sys. Design PART III 2 October, 2003	

Organization	
• Lecture course plus lab	
• Professor	
<ul> <li>Lectures throughout semester</li> </ul>	
<ul> <li>Covers concepts and big picture</li> </ul>	
• Students	
<ul> <li>Learn from a textbook and lectures</li> </ul>	
<ul> <li>Program in lab sections under supervision of TA</li> </ul>	
<ul> <li>Begin with simplified API</li> </ul>	
<ul> <li>Write small pieces of code</li> </ul>	
Teach Net. Sys. Design PART III 3 October, 2003	

	Topics (continued)		
	(continuea)		
• Detailed example of o	one network proce	essor	
– Architecture of ea	ch piece		
– I/O and internal n	nemory interfaces		
<ul> <li>Programming mod</li> </ul>	lel and structure of	of software	
<ul> <li>Cross-developmer</li> </ul>	nt environment		
<ul> <li>Examples of code</li> </ul>			
_			
Teach Net. Sys. Design PART III	5	October, 2003	

What Students Do Not Learn		NOTES
• Engineering details		
• How to create large, complex network systems		
All possible optimizations		
• All architectural details		
• How to make design tradeoffs		
Products and associated economic costs		
Teach Net. Sys. Design PART III 6	October, 2003	
		<b>_</b>

Exampl	e Grading Scl	heme		
• In-class quizzes 5%				
• Midterm and final exa	ams 35%			
Programming projects	s in lab 60%			
Teach Net. Sys. Design PART III	7	Octo	ober, 2003	

The Lab Scheduling Problem	NOTES
• Undergrads have little background	
• First half of course covers general material	
<ul> <li>Network systems</li> </ul>	
<ul> <li>Alternative implementations</li> </ul>	
– Architectures	
• Second half of course presents details of one NP	
– Hardware	
<ul> <li>Programming model</li> </ul>	
• Question: what lab projects can students do during the first half of the course?	
Teach Net. Sys. Design PART III 8 October, 2003	

Our Solution	
• Present students with a higher-level programming system	
– Provide a simplified API that hides details	
<ul> <li>Make it easy to transmit or receive packets</li> </ul>	
Have students use embedded processor	
– Bridge	
– IP fragmenter	
• Defer microengine programming to second half of course	
Teach Net. Sys. Design PART III 9 October, 2003	

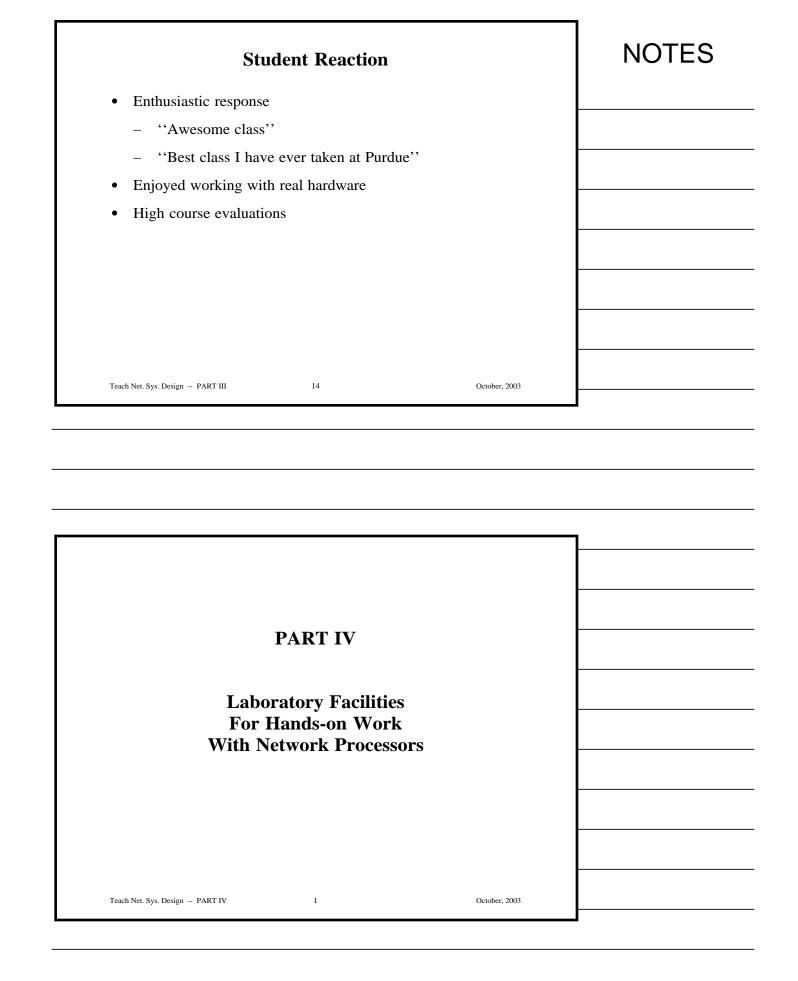

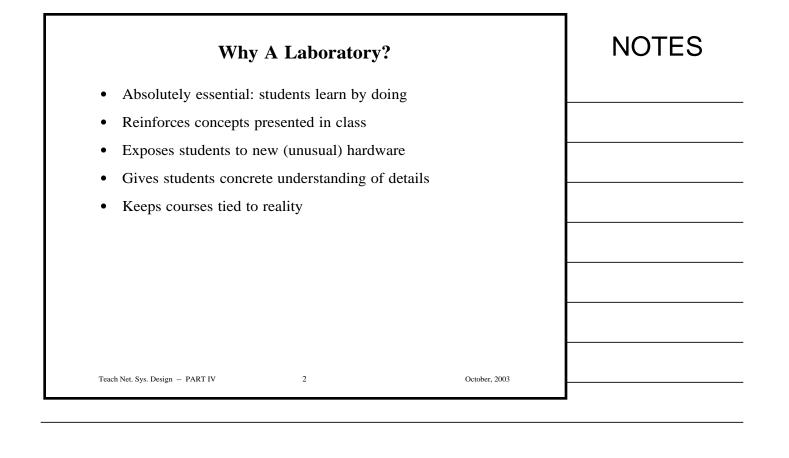

Student Lab Projects (Intel)	
• Using simplified API on embedded processor	
– Compile, download, and run code	
<ul> <li>Packet analyzer (IP/TCP/ARP)</li> </ul>	
<ul> <li>Layer 2 bridge</li> </ul>	
– IP fragmenter	
– Traffic classifier (i.e., packet analyzer)	
Teach Net. Sys. Design PART III 11 October, 2003	

Using microcode on packet engine     Compile, download, and run a program     Classifier microblock     Frame forwarding microblock, where destination     depends on classification      Teach Net. Teach Net. Sys. Design -- PART III

13

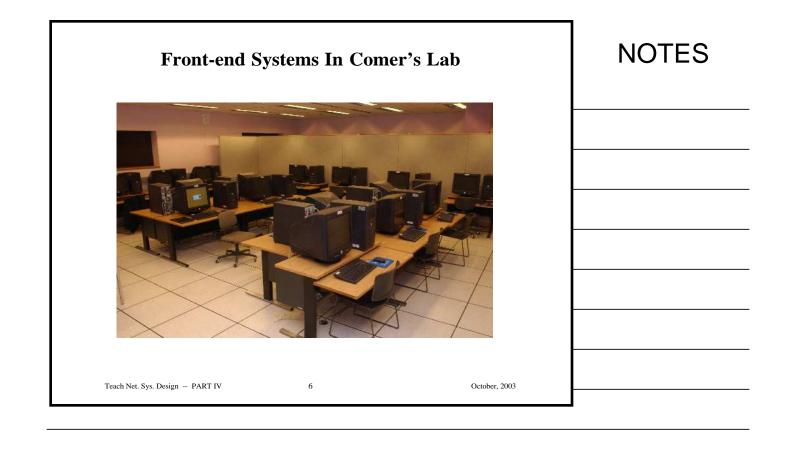

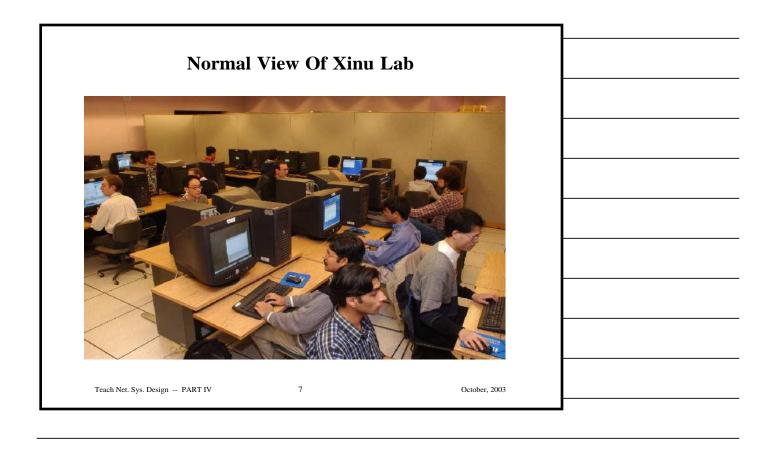

Equipment Needed For A I	.ab	
• Two types		
• Front-end facilities		
<ul> <li>Conventional workstations</li> </ul>		
<ul> <li>Connected to production network</li> </ul>		
– Run standard OS		
<ul> <li>Used to prepare software</li> </ul>		
Back-end facilities		
<ul> <li>Used for experimentation</li> </ul>		
- Students download/configure		
Teach Net. Sys. Design PART IV 3	October, 2003	

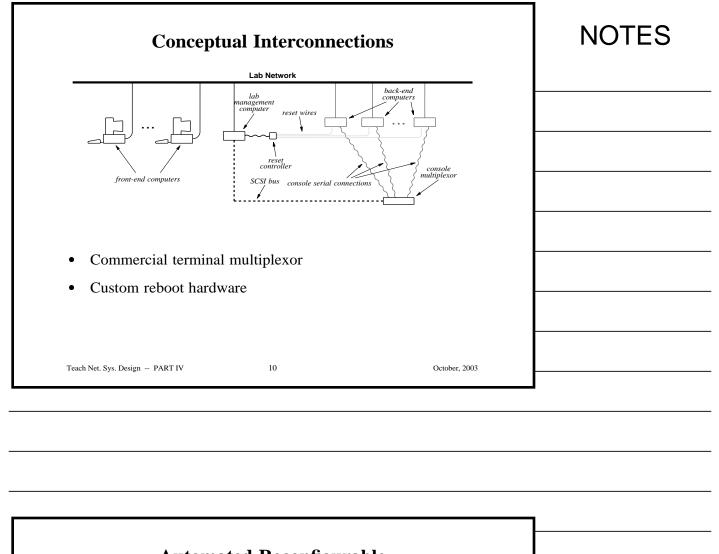

Facilities Ir	The Xinu	Lab†		
• Front-end systems				
– 24 workstations runn	ng Linux			
<ul> <li>Connected via gigabi</li> </ul>	Ethernet			
• Back-end systems				
– 85 PCs				
<ul> <li>Miscellaneous routers</li> </ul>	, load balance	er, etc.		
• Networks				
– Gigabit Ethernet (pro	duction)			
– Various 10/100/1000	Ethernets (ex	(perimental)		
†Thanks to: Intel, IBM, Cisco,	Agere, AT&T,	and others.		
Teach Net. Sys. Design PART IV	5		October, 2003	

Back-end Systems In Comer's La	ab	NOTES
Teach Net. Sys. Design PART IV 8	October, 2003

Teach Net. Sys. Design -- PART IV

NOTES

Refer	ence Platform		
• Provided by vendor			
• Targeted at potential cu	istomers		
• Usually includes			
- Hardware testbed			
– Simulator/emulator	2		
- Cross-development	software		
<ul> <li>Download and boot</li> </ul>	strap software		
<ul> <li>Reference implement</li> </ul>	ntations		
Teach Net. Sys. Design PART IV	13	October, 2003	
			1

Two Type Reference Pla	NOTES	
• Stand-alone		
– Separate chassis and power s	ly	
<ul> <li>Contains control processor plana</li> </ul>	NP system	
• Single-board testbed		
– Plugs into control system (us	y a PC)	
<ul> <li>Controlled via bus</li> </ul>		
Teach Net. Sys. Design PART IV 14	October, 2003	
		]

Example Ref	erence Hardwai	re (Intel)	
• Single-board network	processor testbed		
• Plugs into PCI bus of	n a PC		
• Code name <i>Bridal Va</i>	eil		
• Manufactured by Rad	lisys		
Teach Net. Sys. Design PART IV	15	October, 2003	

	Inte	l Reference Software		
• Know	n as <i>Softwa</i>	re Development Kit (SDK)		
• Runs o	on PC			
<ul> <li>Includ</li> </ul>	es:			
	Software	Purpose		
Mi	compiler croC compiler sembler	Compile programs for the StrongARM Compile programs for the microengines Assemble programs for the microengines		
Do	wnloader onitor	Load software into the network processor Communicate with the network processor and interact with running software		
	otstrap ference Code	Start the network processor running Example programs for the IXP1200 that show		
		how to implement basic functions		
Teach Net. Sys. Des	ign PART IV	17	October, 2003	

External Access	NOTES
• SDRAM accessed via SDRAM bus	
SRAM and Flash accessed via SRAM bus	
• Ethernet ports accessed via IX bus	
Code and data downloaded via PCI bus	
• NFS accessed via PCI bus	
• StrongARM accessed via	
– Serial line (console)	
– Telnet	
Teach Net. Sys. Design PART IV 18 October, 2003	
	l

			]
Bas	ic Paradigm		
• Build software on conv	ventional computer	r	
• Load into reference sys	stem		
• Test/measure results			
Teach Net. Sys. Design PART IV	19	October, 2003	

	Ou	r Requirements		NOTES
•	Intel SDK designed	to use		
	<ul> <li>Windows system</li> </ul>	ı (compile)		
	– Unix downloader	r		
•	Our requirement			
	– No Windows			
•	Solution			
	– Windows emulat	or when needed (Wi	ne)	
Tea	ach Net. Sys. Design PART IV	20	October, 2003
