

```
set my_addr          /* define a set of IP addresses */
  < 1 > {           /* number of keys in each entry */
    size_hint { 256 }
  }
```

Figure 16.6 Illustration of an NCL set declaration. Each entry contains one key, and the programmer estimates the set will contain two hundred fifty-six items.
